MozziQuit MINI 3 Pin
MRP Rs. 2,499/- inclusive of GST

MozziQuit MAX
MRP Rs. 3,999/- inclusive of 18% GST

Information on How to Use MozziQuit Mosquito Trap

1. Female Mosquitoes enter inside houses and cow sheds every day by detecting the smell of carbon dioxide exhaled by people and cows to bite and extract blood required for breeding. After extracting blood each female mosquito lays more than 1000 eggs at external breeding locations in their life span of 30 to 100 days
2. MozziQuit attracts and traps female mosquitoes every day at less than 10 to 25 paisa per day operating cost only for electric power without use of any chemicals or consumables or fumes or smell or sound.
3. Food Grade Powder Additives are added in Plastic Raw Material while manufacturing few parts of device in Injection Molding Machine which remain in it till its life time beyond 10 years.
4. MozziQuit does not attract any mosquito from outside as the quantity of food grade powder is added in its plastic casing is as per required dose to attract the mosquitoes which have come inside the room and cow shed.
5. When we see mosquitoes flying inside the room, we have to Switch On MozziQuit device in the room, touch/shake the curtain of window so that mosquitoes will fly if sitting on curtain, put off the light in the room, close the door and be in other room for some time (10 or 15 minutes). All mosquitoes which were already found inside the said room will come near the trapping zone of MozziQuit and the fan installed inside the device will suck mosquitoes and they will get collected inside the removable collection container fixed below MozziQuit device. Donot open the collection container immediately as it takes some time for mosquitoes to die inside the collection container.
6. Similarly MozziQuit could be used in other rooms when ever you see mosquitoes flying in other rooms.
7. While watching TV and when light in Hall is On mosquitoes do not go near MozziQuit instead they come near us because of the smell of carbon dioxide exhaled by us. Customer feedback is when they see mosquitoes in the Hall they switch On MozziQuit in Hall, put off TV and Light in Hall, be inside other room for some time by closing the door of that room. Mosquitoes flying in the Hall get trapped in MozziQuit.

-: 2 :-

8. Use MozziQuit in bedroom for some time by switching off light, closing the door before going to sleep and after that they keep MozziQuit in Hall or in Kitchen or Bathroom/Toilet till morning 6 am or 7 am so that all mosquitoes existing in said places will get trapped.
9. In Flats Mosquitoes usually found outside the main entrance door which gets inside the flat with the breeze when people open the entrance door to get inside. Fix MozziQuit device above the entrance door outside the flat by making plug point. Switch On every day after 5 pm till 6 or 7 am in the morning and all mosquitoes found outside the main door get trapped in collection container.
10. Empty the dead mosquitoes from collection container next day morning after personally seeing the number of dead mosquitoes. If not emptied then ants will come and take one by one in queue to eat dead mosquitoes.
11. Mosquitoes are found near Dog Cage. MozziQuit traps mosquitoes when installed near the Dog Cage.
12. Density/Number of mosquitoes found inside cow shed is huge. Report of Veterinary Hospital Director and Evaluation Report of Karnataka Veterinary, Animal & Fisheries Sciences University of Bidar confirm increase in Milk Yield as well a increase in Weight of Cows after using MozziQuit in cow sheds.
13. Watchman in Apartment Building are allowed to sleep after 12 am in the night. Watchman have to switch On MozziQuit near the place where they sleep. Watchman have to sleep inside the mosquito net which is provided free of cost by Municipalities. Watchman will not get any mosquito bite as he is inside the mosquito net and all mosquitoes come near to him to bite by the smell of carbon dioxide exhaled by him will get trapped in MozziQuit device.
14. Team of Scientists of ICMR and NIMR have issued Final Report on trapping performance of MozziQuit confirming trapping of all species of mosquitoes
15. People who bought one device have purchased 4 to 5 more devices after using the first device in their house.
16. We are on the Mission of Making Mangalore, Karnataka, India and the World Free of Mosquito Menace in short span of time using MozziQuit and other technologies and we request you to be part of this Mission as one female mosquito could multiply into more than 10 lakh numbers in one year by laying more than 1000 eggs in 30 to 100 days of their life cycle if not trapped using MozziQuit device.
17. MozziQuit device have 6 months Warranty against manufacturing defects if any.
18. Please inform your contacts to buy & use MozziQuit and be a part of our Mission of Making India Free of Mosquitoes in short span of time.
